# Chapter 1. User’s Guide

## 1.1. Overview

Various checks related to SIP URI.

## 1.2. Dependencies

### 1.2.1. SER Modules

The following modules must be loaded before this module:

- *a SER database module.*

### 1.2.2. External Libraries or Applications

The following libraries or applications must be installed before running SER with this module loaded:

- *None.*

## 1.3. Exported Parameters

### 1.3.1. db\_ur1 (string)

URL of the database to be used.

*Default value is “sql://serro:47serro11@localhost/ser”.*

#### Example 1-1. Set db\_ur1 parameter

```
...
modparam("module", "db_url", "sql:/username:password@localhost/ser")
...
```

### 1.3.2. `uri_table` (string)

Table containing list of allowed URIs for each user.

*Default value is “uri”.*

#### Example 1-2. Set `uri_table` parameter

```
...
modparam("module", "uri_table", "uri")
...
```

### 1.3.3. `uri_user_column` (string)

Column holding usernames in the URI table.

*Default value is “username”.*

#### Example 1-3. Set `uri_user_column` parameter

```
...
modparam("module", "uri_user_column", "username")
...
```

### 1.3.4. `uri_domain_column` (string)

Column holding domain in the URI table.

*Default value is “domain”.*

#### Example 1-4. Set `uri_domain_column` parameter

```
...
modparam("module", "uri_domain_column", "domain")
...
```

### 1.3.5. `uri_urouser_column` (string)

Column holding URI username in the URI table.

*Default value is “uri\_user”.*

**Example 1-5. Set `uri_uriuser_column` parameter**

```
...
modparam("module", "uri_uriuser_column", "uri_user")
...
```

**1.3.6. `subscriber_table` (string)**

Name of the subscriber table.

*Default value is “subscriber”.*

**Example 1-6. Set `subscriber_table` parameter**

```
...
modparam("module", "subscriber_table", "subscriber")
...
```

**1.3.7. `subscriber_user_column` (string)**

Column holding username in subscriber table.

*Default value is “username”.*

**Example 1-7. Set `subscriber_user_column` parameter**

```
...
modparam("module", "subscriber_user_column", "username")
...
```

**1.3.8. `subscriber_domain_column` (string)**

Column holding domains in the subscriber table.

*Default value is “domain”.*

**Example 1-8. Set `subscriber_domain_column` parameter**

```
...
modparam("module", "subscriber_domain_column", "domain")
...
```

## 1.4. Exported Functions

### 1.4.1. `is_user(username)`

Check if the username in credentials matches the given username.

Meaning of the parameters is as follows:

- *username* - Username string.

#### Example 1-9. `is_user` usage

```
...
if (is_user("jan")) {
    ...
};
```

### 1.4.2. `check_to()`

Check To username against URI table or digest credentials.

#### Example 1-10. `check_to` usage

```
...
if (check_to()) {
    ...
};
```

### 1.4.3. `check_from()`

Check From username against URI table or digest credentials.

#### Example 1-11. `check_from` usage

```
...
if (check_from()) {
    ...
};
```

#### **1.4.4. `does_uri_exist()`**

Check if username in the request URI belongs to an existing user.

##### **Example 1-12. `does_uri_exist` usage**

```
...
if (does_uri_exist( )) {
    ...
};
```

# **Chapter 2. Developer's Guide**

The module does not provide any sort of API to use in other SER modules.

# **Chapter 3. Frequently Asked Questions**

## **1. Where can I find more about SER?**

Take a look at <http://iptel.org/ser>.

## **2. Where can I post a question about this module?**

First at all check if your question was already answered on one of our mailing lists:

- <http://mail.iptel.org/mailman/listinfo/serusers>
- <http://mail.iptel.org/mailman/listinfo/serdev>

E-mails regarding any stable version should be sent to <[serusers@iptel.org](mailto:serusers@iptel.org)> and e-mail regarding development versions or CVS snapshots should be send to <[serdev@iptel.org](mailto:serdev@iptel.org)>.

If you want to keep the mail private, send it to <[serhelp@iptel.org](mailto:serhelp@iptel.org)>.

## **3. How can I report a bug?**

Please follow the guidelines provided at: <http://iptel.org/ser/bugs>
